Code of Federal Regulations, Title 40, Protection of Environment, Pt. 86 (Sec. 86.600-1-End), Revised as of July 1, 2006 Aug 13 2022 The Code of Federal Regulations is a codification of the general and permanent rules published in the Federal Register by the Executive departments and agencies of the United States Federal Government.

A Scheduling Model for the U.S. Marine Corps Communication-Electronics School Nov 11 2019 This thesis presents a mixed integer program (MIP) to schedule sequences of classes attended by Marines at the Marine Corps Communication- Electronics School in order to qualify them for communications and electronics military occupational specialties. The schedule determines the starting dates and the number of students to enroll in each instance or class of various course types. The courses follow a specific sequence and many classes of a course may be scheduled within a fiscal year. Students attend one or more of the courses and may wait some time for a class of a subsequent course to convene. The objective of the MIP is to reduce the amount of delay students incur while waiting for classes of additional courses to start in the sequence. Due to the size and complexity of the model, the MIP initially schedules classes with a weekly resolution but then adjusts the starting dates to produce a daily schedule. For 1993 data, the MIP is solved in less than 10 minutes on a desktop computer (80486 processor at 66MHz with at least 64M RAM) and produces a schedule which has 62% less delay than the actual schedule for that year.

Modelling and Managing Airport Performance Feb 13 2020 Modelling and Managing Airport Performance provides an integrated view of state-of-the-art research on measuring and improving the performance of airport systems with consideration of both airside and landside operations. The considered facets of performance include capacity, delays, economic costs, noise, emissions and safety. Several of the contributions also examine policies for managing congestion and allocating sparse capacity, as well as for mitigating the externalities of noise, emissions, and safety/risk. Key features: Provides a global perspective with contributing authors from Europe, North and South America with backgrounds in academia, research institutions, government, and industry. Contributes to the definition, interpretation, and shared understanding of airport performance measures and related concepts. Considers a broad range of measures that quantify operational and environmental performance, as well as safety and risk. Discusses concepts and strategies for dealing with the management of airport performance. Presents state-of-the-art modelling capabilities and identifies future modelling needs. Themed around 3 sections - Modelling Airport Performance, Assessing Airport Impacts, and Managing Airport Performance and Congestion. Modelling and Managing Airport Performance is a valuable reference for researchers and practitioners in the global air transportation community.
